

Technical Lead, AI Agent Platform & Operations

Our client is building a first-in-class AI Agent platform that enables teams across Drug Discovery, Clinical Development, Medical Writing, Regulatory Affairs, Manufacturing, and Corporate Functions to automate complex business processes and accelerate decision making.

Their platform powers a growing portfolio of AI agents used throughout the organization. They are seeking a highly technical leader who can balance software delivery, engineering excellence, platform reliability, and operational health while helping scale both their technology and engineering teams.

Role Overview

We are seeking an experienced Technical Lead to guide the design, development, and operational excellence of the company's AI Agent platform.

This role combines hands-on software engineering, technical leadership, DevOps ownership, and operational team leadership. The ideal candidate enjoys solving complex engineering problems, mentoring engineers, building scalable systems, and ensuring the long-term health and stability of production platforms.

You will work closely with product managers, business stakeholders, architects, and engineering teams to deliver scalable AI solutions while maintaining a strong focus on reliability, engineering quality, observability, operational excellence, and continuous improvement.

Required Qualifications

- 5+ years of software engineering experience
- 2+ years serving as a Technical Lead, Lead Engineer, Staff Engineer, Principal Engineer, or equivalent role.
- Strong proficiency in Python and modern backend development.
- Strong experience with React and TypeScript.

- Experience designing and operating cloud-native applications.
- Experience leading technical teams and mentoring engineers.
- Strong understanding of software architecture and distributed systems.
- Experience implementing CI/CD pipelines and DevOps best practices.
- Experience managing production systems and operational support processes.
- Demonstrated ownership of systems from development through production operations.
- Strong communication and stakeholder management skills.
- Ability to balance strategic leadership with hands-on execution.

Preferred Qualifications

- Experience building AI, Generative AI, or Agentic AI platforms.
- Experience with AWS cloud services.
- Experience with OpenSearch or Elasticsearch.
- Experience with monitoring and observability platforms.
- Experience with Kubernetes, Docker, and Infrastructure as Code.
- Experience establishing operational metrics and service level objectives.
- Experience supporting enterprise-scale production applications.
- Familiarity with pharmaceutical, biotech, or regulated environments.

Key Responsibilities

Technical Leadership

- Lead architecture and technical design discussions across AI agent initiatives.
- Establish engineering standards, coding practices, and development guidelines.
- Conduct code reviews and mentor engineers across multiple teams.
- Guide technical decision-making and technology selection.
- Breakdown complex initiatives into actionable technical workstreams.
- Support onboarding and development of new engineers.
- Serve as the primary technical escalation for challenging engineering issues.
- Partner with project managers to ensure successful project execution.

Software Development

- Design, develop, and maintain AI powered applications, using python, FastAPI, react, and type script.
- Build reusable platform capabilities, that support multiple AI agents and business functions.
- Collaborate with stakeholders to transform business requirements into scale technical solutions.
- Write detailed design documents to clearly communicate architecture, technical decisions, and implementation plans.
- Write detailed design documents to clearly communicate architecture, technical decisions, and implementation plans.
- Drive adoption of secure, coding practices, automated, testing, and engineering best practices.
- Contribute hands-on code while maintaining technical leadership responsibilities.

DevOps & Platform Engineering

- Own CI/CD processes, deployment, standards, and release management practices.
- Improve deployment reliability, release velocity, and engineering productivity.
- Manage cloud, environments, and platform services.
- Drive infrastructure automation and platform standardization.
- Establish monitoring, logging, observability, and alerting best practices.
- Improve engineering tooling, developer workflows, and platform automation.
- Maintain platform, documentation, runbooks, and operational procedures.

Operational Health Ownership

- Own the overall operational health of the AI agent platform.
- Monitor platform performance, availability, scalability, reliability, and supportability.
- Lead root cause analysis and remediation efforts for production incidents.
- Established operational KPI's, health metrics, and reliability targets.
- Ensure production support processes are documented, sustainable, and measurable.
- Drive continuous improvement initiatives across platform reliability and engineering operations.
- Maintain visibility into platform health through dashboards, reporting, and operational reviews.

Operational Team Leadership

- Lead the Operational Health team responsible for platform stability, reliability, engineering excellence, and continuous improvement.
- Own and maintain the operational backlog.
- Prioritize initiatives, such as:
 - Technical debt reduction
 - Platform enhancements
 - Bug fixes
 - Infrastructure improvements
 - Observability initiatives
 - Security improvements
 - Developer productivity enhancements
 - Automation opportunities
- Facilitate recurring operational review meetings.
- Coordinate efforts across engineering teams to address cross-functional operational.
- Develop processes for onboarding engineers and supporting engineers between project assignments.
- Balance feature delivery with long-term platform, health and sustainability.

Team & Process Leadership

- Support Agile ceremonies and sprint planning activities.
- Help prioritize engineering investments alongside business priorities.
- Coordinate work across multiple engineering teams.
- Promote a culture of ownership, accountability, and continuous improvement.
- Drive engineering excellence through mentorship and operational rigor.

What Success Looks Like

Within the first year, this individual will:

- Serve as the technical leader for multiple AI Agent initiatives
- Successfully establish and lead the Operational Health team
- Build and maintain a prioritized operational backlog aligned to business objectives
- Improve platform reliability, observability, and deployment success rates
- Reduce technical debt while improving delivery velocity
- Establish operational KPIs and recurring operational review process
- Improve engineer onboarding and platform knowledge sharing

- Increase platform scalability and engineering efficiency
- Develop future technical leaders within the organization
- Help scale the AI Agent platform for continued enterprise adoption

Ideal Candidate Profile: A highly hands-on technical leader who can simultaneously lead engineers, own platform reliability, drive DevOps maturity, manage an operational backlog, and improve the long-term health of the AI Agent ecosystem.
